

Town of Hampton, New Hampshire

Capital Improvement Plan – Public Works Department

Bicentennial Park Seawall Replacement

Projected Cost \$500,000 2016

The seawall that protects Bicentennial Park has significant deficiencies and needs to be replaced.

The Town commissioned Ross Engineering firm to perform an inspection of the seawall and prepared the attached report.

The report outlines potential immediate/short term repairs and permanent/long term reconstruction. The Public Works Department recommends the long term reconstruction alternative. The \$500,000 estimated cost was derived from information supplied by the State of New Hampshire using historic costs for similar projects.

The ultimate reconstruction design shall be decided at a later date.
